

AHMAD SYAFIQ KAMIL

Developer Advocate | Developer Relations Engineer

Jakarta, Indonesia | ahmadsyafiqkamil@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

7 years as a software engineer, 2 years teaching computer science at university. Those two things work well together for developer advocacy: I write production code and I know how to explain it to someone seeing it for the first time. I've taught 100+ students a semester, trained engineering teams at Indonesia's national tech agency, and shipped applications used across 7 countries. On the blockchain side, I've built DApps on Ethereum with Solidity and Web3.js. I know the developer community in Southeast Asia and the Middle East from direct experience, which matters for P2P financial infrastructure.

EXPERIENCE

Universitas Nahdlatul Ulama Surabaya | Lecturer, Computer Science 2017 – 2019
Surabaya, Indonesia | 2 years, full-time faculty

- Taught 24 credit hours a week across four CS courses: Algorithms, Data Structures, Web Development, and Mobile Programming.
- Worked with 100+ students each semester. Built the curriculum around practical, industry-standard work rather than purely theoretical coverage.
- Designed hands-on assignments that pushed students to actually build things, not just pass exams.
- Got good at explaining recursion, graph algorithms, and RESTful design to people seeing them for the first time. That skill transfers directly to developer advocacy.

Syamil Solusindo Semesta | Senior Full Stack Engineer & Lead Consultant Jan 2022 – Present
Remote / Jakarta | 7 Indonesian diplomatic missions across Malaysia and UAE

- Designed, built, and deployed 8 applications across 7 Indonesian diplomatic missions. Used daily by 500+ consular staff and registered by over 1 million Indonesian citizens.
- Currently building an AI chatbot for consular services at KJRI Dubai using Google ADK, FastAPI, and PostgreSQL. One of the first LLM-agent deployments in Indonesian government infrastructure.
- Wrote technical handover documentation clear enough that international clients could run their own infrastructure without calling back for support.
- Applied ISO 27001 controls across all applications: RBAC, AES-256 encryption, audit logging on classified diplomatic and citizen data.

Badan Riset dan Inovasi Nasional (BRIN) | Research Engineer 2022 – 2025
Jakarta, Indonesia | National Research and Innovation Agency

- Built automation tools and API integrations adopted as internal infrastructure by BRIN research teams, including a BPS API wrapper giving researchers programmatic access to national statistics.
- Produced analytical reports that fed directly into policy memos submitted to multiple Indonesian government ministries.
- Automated data collection using Python (BeautifulSoup, Selenium), cutting manual research hours across several ongoing national projects.

Badan Pengkajian dan Penerapan Teknologi (BPPT) | AI/ML Engineer 2021 – 2022
Jakarta, Indonesia | National Technology Assessment and Application Agency

- Trained 20+ research engineers on MLOps infrastructure: Kubernetes, Docker, CI/CD pipelines. Most of them had never worked with containerized workflows before.
- Built a face recognition attendance system using Python, TensorFlow, and ResNet. Reached 92% accuracy. A government ministry is still using it.
- Co-built the MLOps stack from scratch: server setup, automated model training, versioning, deployment pipelines.

Embassy of Indonesia in Kuala Lumpur (KBRI) | Software Engineer 2019 – 2021

Kuala Lumpur, Malaysia

- Built and deployed three applications in 14 months: Queue Management, Numbering System, and a COVID-19 Aid Distribution tracker. Used by embassy staff and Indonesian citizens daily.
- Maintained 10+ embassy IT systems at 99% uptime. Moved several manual paper workflows online and cut document processing time by about 30%.

Upwork | Full Stack Developer & DevOps Engineer

2023 – Present

Remote | International freelance clients

- Deployed ODK Central on DigitalOcean for two international research clients, then wrote documentation clear enough that they never needed to call back.
- Contributed to a medical data collection project for a hospital in Bandung as part of a health survey led by PCNU Germany.

PROJECTS

BetterFuture & E-Voting DApps

2025

Two Ethereum DApps: a tokenized incentive system (BetterFuture) and an on-chain voting app. Built with Solidity and Web3.js. No central server. State lives on-chain, so no single party controls the outcome.

Tech: Solidity, Ethereum, Web3.js, Vite.js, Hardhat

AI Chatbot for Consular Services (KJRI Dubai)

2025 – 2026

Building an LLM-agent chatbot for Indonesian citizens in UAE. USDT is actually how many people in that community send money across borders, so this project gave me a close look at real P2P financial use cases. One of the first AI-agent deployments in Indonesian diplomatic infrastructure.

Tech: Google ADK, Python, FastAPI, PostgreSQL, Docker

AI Data Pipeline Automation

2025

Built a working prototype of AI-driven data processing using the Claude API and n8n. Mostly an experiment to see what's possible with agent-based automation, and a good exercise for the kind of sample projects I'd build in a DevRel role.

Tech: Python, Claude AI API, n8n, Docker, PostgreSQL

Protkons (National-Scale Consular Protection Platform)

2022 – Present

Consular protection system running across 6 Indonesian missions in Malaysia. Handles registration, legal protection, and welfare cases for over a million registered Indonesian citizens.

Tech: PHP, CodeIgniter, MySQL, Docker

MLOps Infrastructure for National Research

2022

Built shared ML infrastructure on Kubernetes and Kubeflow for BRIN. Got it adopted by multiple research centers by running hands-on training rather than just dropping documentation on people.

Tech: Kubernetes, Docker, Python, TensorFlow, MLflow

SKILLS

Languages: TypeScript / JavaScript, Python, Solidity, Go, SQL, PHP, Rust

Frontend: React, Next.js, SwiftUI (iOS)

Backend: Node.js, FastAPI, Django REST Framework, Flask, Laravel

Blockchain & P2P: Solidity, Ethereum, Web3.js, Hardhat, SUI Blockchain

Infrastructure: Kubernetes, Docker, AWS, DigitalOcean, CI/CD, Linux, Nginx

AI & Automation: Google ADK, LangChain, LangGraph, Claude API, n8n, MLOps

Tools: Claude Code, Cursor, Git, GitHub Actions, Postman, Figma

Security: ISO 27001, RBAC, AES-256 Encryption

EDUCATION

Master of Computer Science (M.Kom), Information Systems

2015 – 2018

Institut Teknologi Sepuluh Nopember (ITS) Surabaya | GPA: 3.38

Bachelor of Computer Science (S.Kom), Information Systems

2010 – 2015

Universitas Jember | GPA: 3.34

CERTIFICATIONS & TRAINING

- Architect AI Agent Systems with Agent-Database Lifecycle (KodingDeepDive x BwAI)	2025
- Deep Agent with LangGraph, LangChain Academy	2025
- SUI Blockchain Bootcamp	2025
- Blockchain Developer (Solidity), BlockDevId	2025
- Apple Academy Developer	2024
- DigitalOcean Kubernetes Challenge	2023
- Digitalent Big Data, Ministry of Communication and Information Technology	2022
- Lead Auditor ISO 27001:2013, Information Security Management	2019

ADDITIONAL

Languages: English, B2 Upper Intermediate (professional working proficiency) | Bahasa Indonesia, native
Timezone: UTC+7 (Jakarta). Used to working across timezones with clients in Malaysia, UAE, and the US.
Travel: Available for developer events and conferences once or twice a quarter.
